

Network Engineering - Racks-PDU-Eficiencia Energetica

Network Engineering España S.L.

Energy Efficiency

[Aisle Containment \(0\)](#)

[Technical floor air control \(4\)](#)

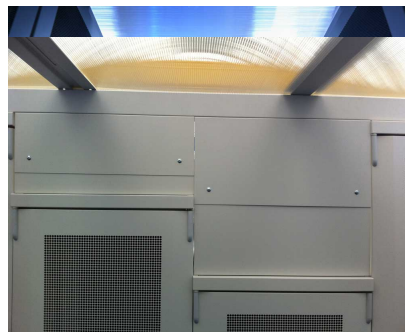

Network Engineering has all necessary components to make your datacenter efficient, so you spend far more less electrical energy. Aisle containment, ready for new installations, or to be adapted to existing datacenters, even without having the need of modifying your existing fire extinguishing installation, thanks to our automated damping roof windows. To manage the airflow under the raised floor, avoiding cold-hot airflow mixing or negative pressure grills, and closing the cable thru correctly. We want the expensive cold air where it should be; inside your cold aisle.

AISLE CONTAINMENT

Aisle containments, rigids or flexible construction, which will fit any aisle architecture or shape built, like different height racks, different manufacturers, or new installations.

FLOOR AIRFLOW CONTROL

Airblocks for cables, which avoid air recirculation thru the wrong way, and fast & cheap installation blanking panels.
