

Network Engineering - Racks-PDU-Eficiencia Energetica

Network Engineering España S.L.

Aisle Containment

On both existing or new Datacenters, our aisle containment systems adapt to any rack manufacturer, any aisle width, any rack height. Our containment aisles are like a "mecano", a wide range of ready to install parts that will fit like a glove into your existing aisle, for instance, leveling different rack heights you may have, or closing vertical gaps using our curtain system, so that we clear your energy efficiency issues, helping you to save electrical energy. Thanks to our continuous R&D, and to the high manufacturing volume we are reaching thanks to the success of our system, we have reduce our prices, so converting your Datacenter into a Energy Efficient one provides you with a shorter Return of Investment. You can buy the parts and install it yourself, our project department will provide you full support to prepare the list of parts to buy, or you may ask for a turnkey installation, and any of our installation partners will take care of that.

AISLE CONTAINMENT GENERAL SPECIFICATIONS

Steel painted parts, standard colors black or light grey. Pre-drilled structure, to avoid drill or cutting tools inside active datacenters. Structure parts fit together with union pieces and M8 screw-washer-nut sets. Automated roof dampers, which avoid having to modify the fire extinguishing piping, to bring it inside the aisles once they are closed. Flexible and adaptable curtains, to fit any shape or vertical gap, fully configurable.
