Temperature & humidity sensor IP PDU

67,00€

Temperature & humidity sensor for Intelligent PDU range (IP PDU)

It has an input/output interface box, with 2 RJ45 female connectors, to connect to the nearer PDU and to extend the bus to the next sensor.

IP PDU can have up to 8 sensors connected, regardless of its type, as the PDU detects the sensors and deliver its measured parameters to the PDU's web interface / email system and SNMP.

The sensor has a 2 meter cable from the interface box, so you can place it at the required measurement point; the sensor has a fixing hole to ensure at its correct position.

Measurement unit $^{\circ}\text{C}$ (celsius centigrades) and humidity porcentual units (%), so that we can determine the required level at this point, , for then stablish minimum and maximum levels at the PDU where the sensor is connected, so we can receive the alarms, buzzer at the PDU, email or SNMP.
